

Competition Directive 2026-2

This Competition Directive comes at the recommendation of the board chair to the Competition Committee in response to concerns about the rising lack of availability of motors for the 1/10 scale classes.

For the remainder of the 2026 ERCU racing season, 1/10 scale motor kv ratings of up to 2050kv (manufacturer's rating) with testing to not exceed 2100kv. After the end of the 2026 racing season, the Competition Committee will meet to suggest a permanent rule change. This way members are legal with motors that they have and further discussion, after the season, will be informed by data and observations from the remainder of the season.

Enforcement

Board inspectors will continue to inspect and test motor kv ratings and results as they have been throughout the season. Members may also voluntarily request motor inspections and testing. The current rule book also allows for random motor testing at any time, which may also be enforced at any given time.

Reminder

All Competition Directives issued by the Competition Committee during the course of the season automatically become proposals for the committee to consider during the process of offseason rules review.
